

Profile

Quantitative risk management specialist with over five years of experience across market risk, model validation, and risk analytics within banking and insurance. Responsible for contributing to, challenging, and validating quantitative risk frameworks for risk measurement and management, including VaR and stress testing. Proficient in Python and R for statistical modelling, large dataset analysis, and automation. Holds an MSc in Econometrics (Erasmus University) and a BSc in Applied Physics (TU Delft). Experienced in regulatory interaction, formal challenge, and the ownership and enforcement of defensible risk methodologies under regulatory scrutiny.

Skills

- **Quantitative & Validation Analysis:** Statistical analysis and testing to assess model behaviour, assumptions, limitations, and output plausibility.
- **Tools & Reproducibility:** Python and R for independent analysis, model interrogation, and reproducible validation work; advanced use of Excel for control and review.
- **Governance & Communication:** Clear, structured written communication of findings, limitations, and judgements for senior risk committees and regulatory-facing governance.

Experience

Phoenix Group - IPV Analyst

11/23 – 05/24

- Performed independent Line 2 review of bond spread inputs used in the valuation of fixed-income and illiquid credit portfolios
- Assessed the reasonableness of observed and model-implied credit spreads and liquidity premia as part of the Group IPV process
- Challenged valuation outputs where spread assumptions were inconsistent with market evidence or valuation standards

TSB Bank - Model Validation Manager

12/19 – 08/21

- Led independent validation of market risk and treasury risk models, including interest rate risk, liquidity risk, and hedging models used for risk management and regulatory purposes
- Reviewed model design, assumptions, calibration approaches, and known limitations to assess model appropriateness and fitness for use
- Issued validation conclusions, identified material model risk issues, and recommended remediation actions in line with model risk governance standards

HSBC - Prudent Valuation Analyst

05/18 – 09/18

- Reviewed and challenged prudent valuation and fair value adjustment outputs for trading book positions to ensure regulatory defensibility
- Assessed reserve levels for illiquid products, focusing on uncertainty, model limitations, and conservatism in line with prudent valuation standards
- Validated key valuation and risk parameters through independent review against PRA and CRR requirements, with findings documented for governance and audit purposes

Aviva - Actuarial Analyst (Contract)**01/18 – 04/18**

- Executed the Solvency II internal model to assess regulatory capital requirements under 1-in-200 stress scenarios
- Analysed credit risk and market risk components of the internal model, interpreting capital impacts and key risk drivers
- Performed analytical checks on internal model outputs, including plausibility and sensitivity analysis, to support internal validation activities

TE Connectivity - Pricing Analyst**05/17 – 11/17****Total Gas and Power - Market Risk Analyst (Contract)****06/16 – 09/16**

- Executed pricing processes for energy products, with a focus on price and volume risk and associated hedging mechanics
- Identified and resolved data and model issues in pricing tools, improving robustness and reliability of outputs delivered to the business

Reaal Insurance - Risk Pricing Analyst**04/14 – 04/15**

- Performed quantitative risk pricing analysis for property and casualty insurance products using large SAS datasets
- Analysed pricing assumptions and competitive benchmarks to understand the relationship between risk characteristics and premium levels

Education**KU Leuven - MSc Actuarial and Financial Engineering****09/24 – present**

- Focus on regulatory capital modelling, financial risk theory, and quantitative methods under Solvency II.

Erasmus University Rotterdam - MSc Econometrics**09/11 – 08/13**

- Advanced training in statistical inference, Bayesian methods, and time series econometrics.

Delft University of Technology - BSc Applied Physics**09/05 – 08/10**

- Strong quantitative and first-principles scientific training in mathematics and physics.

Leiden University - BA Chinastudies**09/06 – 08/11**

- Interdisciplinary study of China's economic, political, and institutional systems.
